

Patient Name ABDULMAJED AL KADAH

Lab No. 2138178609

DOB 31/08/1998

Age 23Y 3M 6D

Gender Male

URN 14122956

Emirates Id

Passport No. N014770652

Physician General Doctor

Collection Center Sharjah International Airport

Performing Lab HUB Lab - Abu Dhabi

Molecular Pathology Department

COVID-19 PCR

Authorised Date 08/12/2021 05:25

2138178609-1: 07/12/2021 15:35 [07/12/2021 15:35] Nasopharyngeal swab - Sterile Container

Test	Result	Flag	Units	Ref. Range
SARS-CoV2-Virus QR Code	Negative			Negative

Method:

Detection of SARS-CoV2 Viral RNA performed on Real Time Polymerase Chain Reaction (RT-PCR).

Procedure :

RNA was extracted using Viral Nucleic Acid Extraction system.

Extracted RNA was amplified using Real Time Fluorescent RT-PCR kit for the detection of SARS-CoV2 Virus.

Interpretation:

This assay detects SARS-CoV2 Virus qualitatively.

Both positive and negative controls for the tested virus showed expected result.

Not detected results may not always rule out current or future infection. Please correlate with clinical findings and repeat if necessary. Lower respiratory sample is recommended in severe and progressive disease.

Positive result indicates the RNA from SARS-CoV2 was detected and patient is infected.

Negative result indicates SARS-Cov2-Virus not present in specimen above the limit of detection.

Presumptive Positive result indicates that one of multiple gene is detected or a low viral load is possible. Patient needs to self-quarantine and the sample should be repeated in 72 hours for confirmation with clinical correlation
